

SCEExpert™ Release Notes

Version: 4.12.1.35

Release date: May 13, 2026

Issues:

#	Description
1.	It was not possible to post Inventory Adjustments to BCD365 for items that did not use Item Tracking. Now, SCEExpert sends Item Tracking information only for items where tracking is required, allowing Inventory Adjustments to be posted successfully for both tracked and non-tracked items.
2.	When the Picklist Break Strategy for Partial Picking was configured with Plan Handling Unit = True and Number Of UOMs was not defined, order / wave planning took considerably longer to complete. Now, wave planning performance under these conditions has been significantly improved, resulting in much shorter planning times.
3.	When a Handling Unit with status Delivered was loaded onto a Shipment, its location was not updated to the Shipment's assigned door. Now, the Handling Unit location is updated to the Shipment door upon loading.
4.	When a Handling Unit was unloaded to a location that was not defined as a Staging Lane, its status did not update to Delivered. Now, the Handling Unit status is updated to Delivered upon unloading to such locations.

Technical Appendix:

#	General
1.	Replace SCExpertConnectBCD365Plugin.dll in the Services folder.
2.	Replace WMSLogic.dll in the Services folder.
3.	Replace WMSLogic.dll in the RDT\Bin folder.
4.	Replace WMSLogic.dll in the RDT\Bin folder.
