

SCEExpert™ Release Notes

Version: 4.12.1.40

Release date: June 23, 2026

Issues:

#	Description
1.	When the location's Put Region value was NULL, the Location Assignment service failed to find a location. Now, when the Put Region field is NULL, the Location Assignment service successfully finds a location.
2.	When a user selected an Inbound Order line that was fully received (Qty To Export is blank), clicking Export to Receipt resulted in an error. Now, when Export to Receipt is clicked, the system exports all eligible lines to the receipt. Workstation → Inbound Process → Inbound Order (IO)
3.	When running Quick Charts on Header - Details screens such as Inbound Order, Outbound Order, etc. the system displayed the wrong number of counted results. Now, Quick Charts displays the correct number of counted results on such screens.
4.	Added support for employee_id, given_name, family_name, and language_id in the OpenID claims.
5.	When the system's authentication method was set to OpenID, users encountered an error when logging in to or logging out of the RDT. Users are now correctly redirected to the appropriate login page when logging in or logging out of the RDT.
6.	SCEExpert Connect BCD365 Plugin now supports importing Warehouse Receipts.
