

SCEExpert™ Release Notes

Version: 4.12.1.41

Release date: June 29, 2026

Issues:

#	Description
1.	The system did not consider the NPP Putaway Volume parameter defined in the Picking Policy when a Negative Pallet Pick (NPP) was planned for a substitute SKU. The NPP Putaway Volume parameter is now correctly applied during planning.
2.	The Remote Printing Client frequently disconnected and did not properly handle large print jobs, often requiring a restart. These issues have been resolved, and the Remote Printing Client now provides improved stability and reliably handles large documents without requiring a restart.
3.	When printing labels using Remote Printing, the system did not consider the number of copies defined in the Label Type and printed only a single copy. The system now prints the number of copies specified in the Label Type.

Technical Appendix:

#	General
1.	Replace WMS.Logic.dll in the Servies folder.
2.	1. Uninstall the current version of the Remote Printing Client using Add or remove programs (in System Settings).
3.	2. Install the latest version of the Remote Printing Client using the provided installer.
